

WEEK 4 ASSESSMENT STUDY GUIDE

ANGULAR

For the assessment you will want to be able to...

ANGULAR

- Describe MVC and identify what each part is doing and how it applies to your application.
- In HTML, use directives such as ng-app, ng-model or ng-view.
- Explain the correct usage of ng-repeat.
- Give examples of using filters.
- Identify dependency injection in Angular.
- Describe what a service is and why you would use it.
- Know how to use methods within a service.
- Explain the difference between template and templateUrl.
- Read and understand Angular routing configuration.
- Differences between directives and components.
- Passing data through the application(from View > Controller > Model).
- Using \$http for HTTP requests
- Know how to write components, controllers, services, routing, and directives from scratch.
- Know how to declare a module.

In addition to this, you should feel comfortable creating simple applications that pass data between two controllers and uses routing.
